Overview

Industrial cable management systems is a leading provider of specialized enclosures designed for industrial applications. Their projects span across residential and commercial sectors, as well as large-scale utility and design-build-commissioning projects.

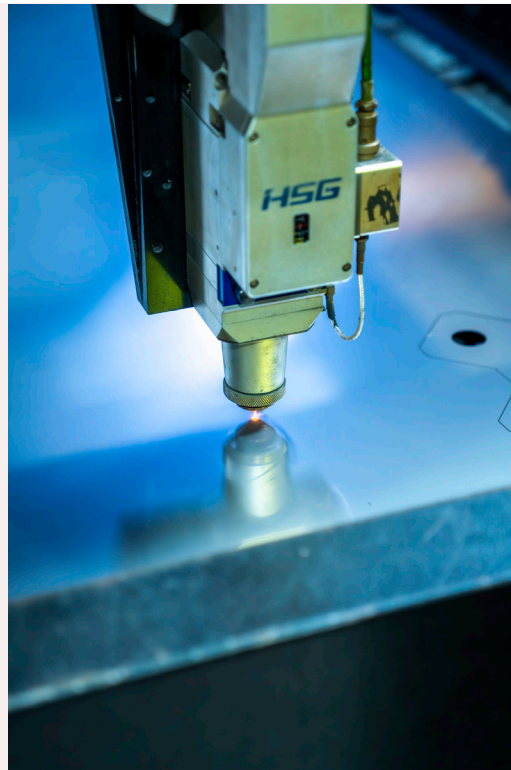

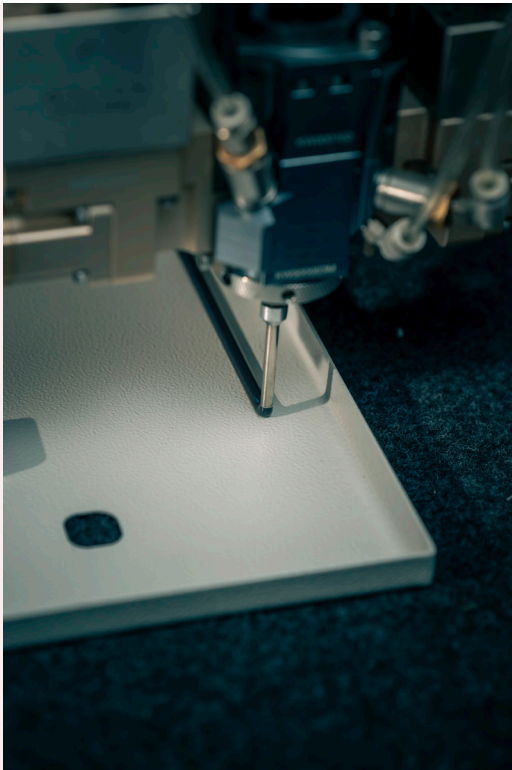

ICMS metal enclosures are designed with high ingress protection ratings, effectively preventing the entry of dust, dirt, oil, and water, making them ideal for use in wet and demanding conditions.

Assembly and Manufacturing

ICMS enclosures are produced with a fast turnaround to meet project timelines. The facility is fully equipped to efficiently handle both small-scale custom requirements and large-volume orders for major projects.

Technical Expertise

Our experienced team combines in-depth knowledge and technical proficiency to deliver efficient design and execution, along with professional advice on design and manufacturing.

Applications

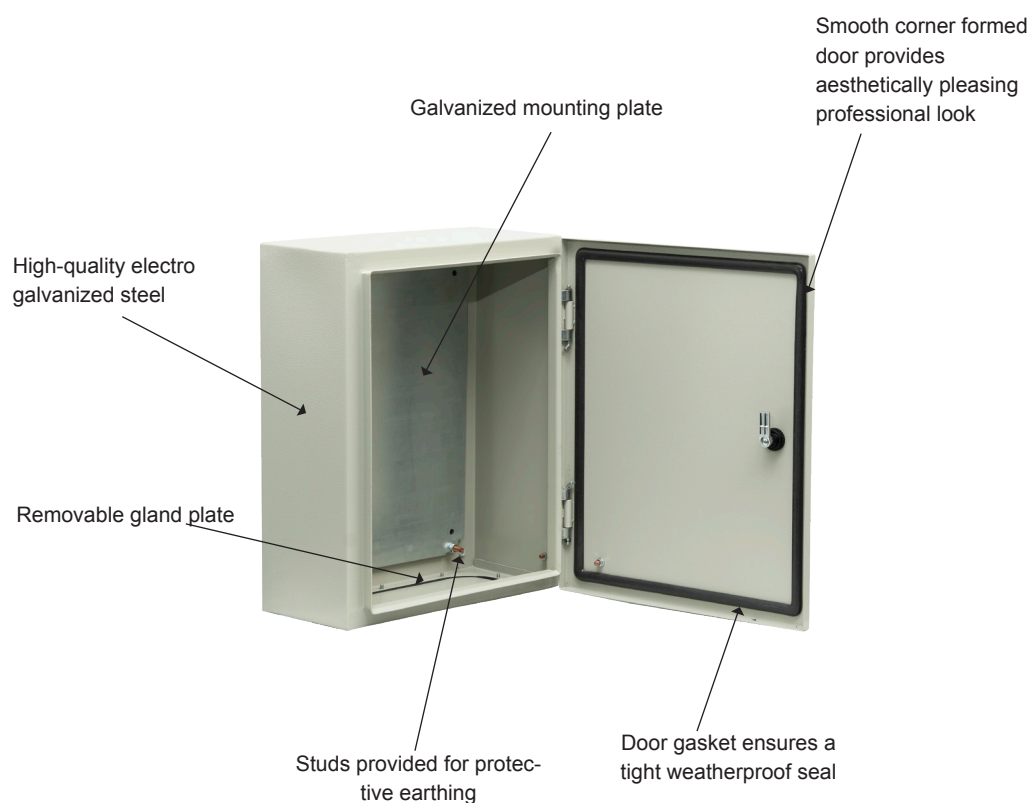

ICMS enclosures are produced with a fast turnaround to meet project timelines. The facility is fully equipped to efficiently handle both small-scale custom requirements and large-volume orders for major projects.

Product Description

ICMS metal enclosures are designed with seamless corners and a robust outer door that opens smoothly while providing effective protection. The clean and refined panel design enhances the overall appearance, making it suitable for modern building environments.

Depending on the model, the enclosure is equipped with one or two gland plates positioned at the base. A wide range of models is available to suit various requirements, including indoor and outdoor use, as well as commercial, industrial, and specialized application.

Certification

ICMS metal enclosures are designed to ensure safety in both residential and commercial installations. A comprehensive program of inspection, verification, and testing is implemented throughout the manufacturing process to maintain high standards of quality and performance.

ICMS ENCLOSURE SERIES ENC1/ENC2

ICMS Enclosures are designed to accommodate a wide range of switchgear and control assemblies for both indoor and outdoor applications. They are suitable for commercial and light industrial electrical installations, providing dependable protection with ingress protection ratings up to IP66.

Key Features

- Suitable for indoor and outdoor installations.
- Corrosion-resistant construction: Powder coated steel for standard use, Stainless steel for harsh environments.
- Full-perimeter PU gasket for IP66 protection - ensures dust and water resistance.
- Secure locking options for safety and tamper resistance.
- IK10 protection against mechanical impacts.

Supply Include:

Enclosure and door, mounting plate, lock system, gland plate, sealing gasket and accessories.

Material Finish:

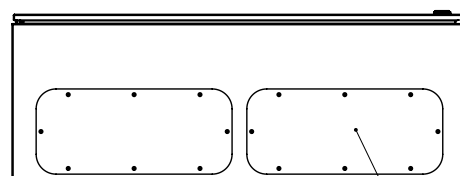

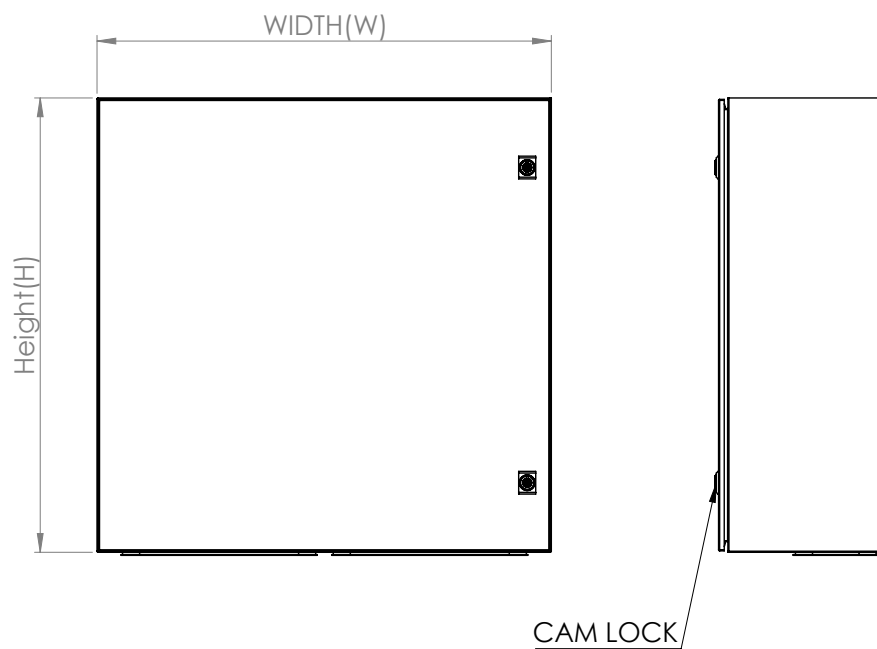

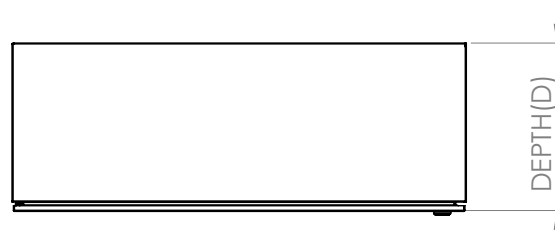

- PC:Epoxy polyester powder coating textured finish in RAL 7032 or RAL 7035
- SS4: Stainless steel SS304
- SS6:Stainless steel SS316
- SS6L:Stainless steel SS316L

Mounting plate: Galvanized steel

Note:

Other thickness, Sizes and colors are available upon request

JUNCTION BOX - JNC1

Application

- Designed for use as a junction box or terminal box with many indoor and outdoor application.

Construction

- Fabricated from 1.2mm to 2mm thick steel sheet.
- Sealing is ensured by all-round gasket.
- Seams continuously welded and ground smooth, no holes or knockouts.

Material Finish:

- PC:Epoxy polyester powder coating textured finish in RAL 7032 or RAL 7035
- SS4: Stainless steel SS304
- SS6:Stainless steel SS316
- SS6L:Stainless steel SS316L
- Mounting plate: Galvanized steel

Note:

- Other thickness and custom made sizes are available upon the request.
- Mounting plate and gland plate to be ordered separately.

COMPARTMENTALIZED ENCLOSURE

ICMS offers flexible compartmentalized enclosures designed for safe and organized electrical installations. These enclosures can be manufactured with internal separation up to Form 4, ensuring enhanced safety and reliability in power distribution systems. The compartmentalized design separates bus bars, functional units, and terminals to reduce fault propagation and allow safer maintenance.

Enclosures can be designed with appropriate IP rating protection suitable for demanding industrial environments. The surface is finished with high-quality powder coating to provide excellent corrosion resistance and long service life.

ICMS enclosures are available in various sizes to meet specific project requirements.

Note:
